

ColorWorkDesk - SITE

FORMULATION AND CORRECTION SOFTWARE

“ColorWorkDesk SITE”

The software in a single screen reports all the functions for the formulation, correction and storage of data.

The Navigator can manage standards and batches in a structure of folders and subfolders defined by the user to quickly and easily track information.

Formulation models for covering, semi-covering and transparent products created by the ColorWorkdesk LAB M system are present.

The active displays allow you to change the data directly where they are displayed and it is possible to save the work at each stage of the process.

The evaluation of the various formulas can be customized based on the customer's needs.

The automatic and manual corrections are very accurate, with the opportunity to ask the system to introduce a colorant foreign to the formula, to improve the DE in extremely critical situations.

The grids that report the values of the differences between the standard and the sample, allow for rapid quality control.

The program is equipped with different types of graphs and prints for the evaluation of formulas, samples and colorants.

FUNCTIONS AVAILABLE IN THE VERSION:

1. Quick storage of color charts in the database.
2. Management of gravimetric and volumetric units of measurement.
3. Creation of customized setups and masks for formulation and correction.
4. Color formulation in coverage, semi-coverage, transparency and with search and search & correct technology
5. Automatic, semi-automatic and manual correction of the formula.
6. Dosing of the formula with the creation of the output file to interface any dispenser.
7. Storage of formulas in progress and definitive.
